Tesla, Inc.

Current Price:	\$236.26
Pre-market Performance:	-0.35%
One-Day Performance:	+0.17%
Next Earnings:	April 22, 2025

AI Prediction

-3.21%

Despite strong market trends supporting potential reversals, TSLA faces significant downward pressure due to poor technical positioning and negative sentiment from influential news and market reputation concerns. Predicting a -3.21% decline reflects these challenges.

▲ Last Senate Trade: Sheldon Whitehouse Sale: \$250,000 ▲

News

- ✓ Tesla is facing significant reputational challenges that could impact sales and investor sentiment, driven by controversies around self-driving technology and company leadership.
- ✓ Despite Elon Musk's backlash towards short sellers like Bill Gates, they have profited significantly from betting against Tesla in a turbulent market.
- ✓ BYD's new ultra-fast charging tech introduces fresh competition for Tesla, potentially impacting TSLA's market share.

Next Earnings:	May 19, 2025

AI Prediction

-1.98%

The prediction of a -1.98% drop stems from bearish signals in technical analysis and slight divergence from key moving averages, buffered by positive yet non-immediate impact news.

News

- ✓ The article suggests that XPEV stands out in the EV market due to its growth potential, innovation, and favorable industry trends.
- ✓ Xpeng Motors is strategically expanding its infrastructure with the launch of its first supercharging station in Hong Kong, aiming to enhance EV adoption and strengthen its market position.
- ✓ XPeng is transitioning its focus from traditional automotive offerings to robotics, believing this will surpass auto industry growth and create new commercial opportunities.

Glossary

Ask: The lowest price a seller is willing to accept for a stock.

Bear Market: A market characterized by falling stock prices.

Bid: The highest price a buyer is willing to pay for a stock.

Breakout: When a stock moves above resistance or below support with increased volume.

Bull Market: A market characterized by rising stock prices.

Circulating Supply: The number of shares or tokens available for trading.

Day Trading: Buying and selling stocks within the same trading day.

Dividend: A portion of a company's earnings paid to shareholders.

EMA (Exponential Moving Average): A moving average that gives more weight to recent price data.

Float: The total number of publicly available shares of a stock.

Fundamental Analysis: Evaluating a stock by analyzing its financials, industry, and economy.

Futures: Contracts to buy or sell an asset at a predetermined price in the future.

Gap Up/Gap Down: A stock opening significantly higher or lower than its previous close.

IPO (Initial Public Offering): The first time a company sells shares to the public.

Leverage: Using borrowed money to amplify potential returns (or losses).

Limit Order: An order to buy or sell at a specific price or better.

Liquidity: How easily a stock can be bought or sold without affecting the price.

MACD (Moving Average Convergence Divergence): A momentum indicator that shows the relationship between two moving averages, helping traders identify trends and reversals.

Margin: Borrowing money from a broker to trade stocks.

Market Capitalization: The total value of a company's outstanding shares.

Market Order: An order to buy or sell immediately at the best available price.

Momentum Trading: Buying stocks based on recent strong upward price movements.

Moving Average: A calculation that smooths out price data to identify trends by averaging past prices over a specific period.

Options: Contracts giving the right (but not obligation) to buy/sell an asset at a specific price.

Penny Stocks: Low-priced stocks (usually under \$5) with high volatility.

Performance: A measure of how well a stock, index, or portfolio has performed over a given period, often expressed as a percentage return.

Position Sizing: Determining how much capital to allocate per trade.

Pullback: A temporary dip in price after a strong move upward.

Resistance: A price level where selling is strong enough to prevent further rise.

RSI (Relative Strength Index): A momentum indicator measuring if a stock is overbought or oversold.

Sector: A group of stocks that operate in the same industry, such as technology, healthcare, or energy.

Short Selling: Borrowing shares to sell, aiming to buy them back at a lower price.

SMA (Simple Moving Average): A basic type of moving average that calculates the average price of a stock over a set number of days.

Spread: The difference between the bid and ask price.

Stop-Loss Order: An order to sell a stock when it reaches a certain price to limit losses.

Support: A price level where buying is strong enough to prevent further decline.

Technical Analysis: Using price charts and indicators to forecast future movements.

VWAP (Volume Weighted Average Price): A trading benchmark that shows the average price a stock has traded at, weighted by volume.

Volatility: The rate at which a stock's price moves up or down.

Volume: The number of shares traded during a specific period, indicating the strength of a stock's movement.

Chart Patterns & Probability

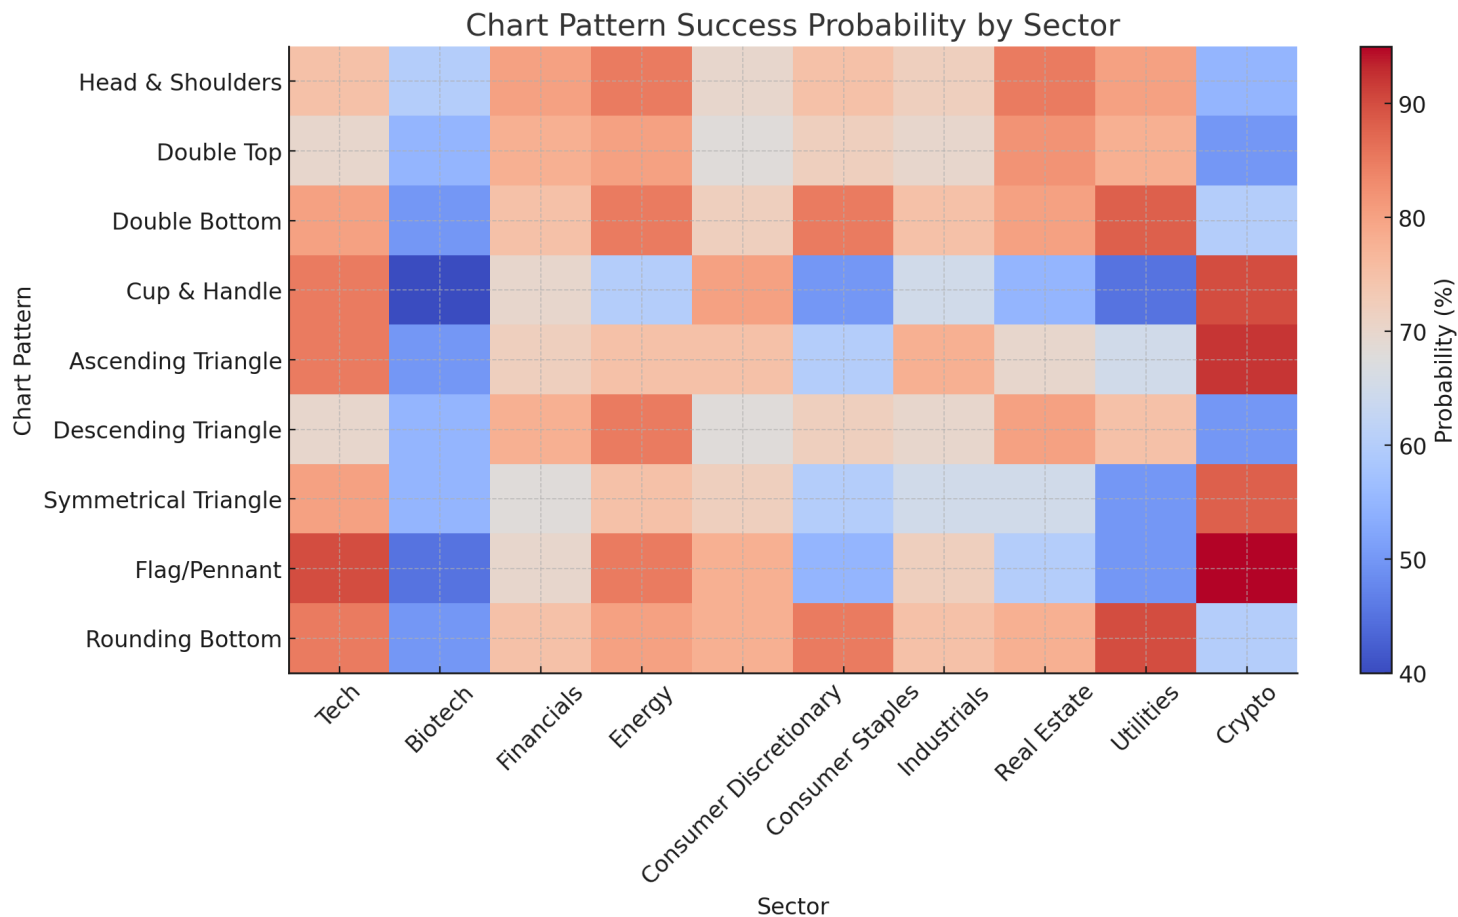

Chart Pattern	Type	Typical Probability	Risk-Reward Ratio	Notes
Head & Shoulders	Reversal	~70-80%	2.5:1	More reliable in high volume conditions
Inverse Head & Shoulders	Reversal	~65-75%	2:1	Stronger in bullish markets
Double Top	Reversal	~65-70%	2.2:1	Needs confirmation on second peak rejection
Double Bottom	Reversal	~72-78%	2.5:1	Works best after strong downtrend
Cup and Handle	Continuation	~75-82%	3:1	Most effective in growth stocks
Ascending Triangle	Continuation	~70-75%	2:1	Requires breakout above resistance
Descending Triangle	Continuation	~65-70%	2:1	More reliable in bearish markets
Symmetrical Triangle	Neutral	~60-65%	2:1	Direction of breakout is key
Flag/Pennant	Continuation	~70-80%	3:1	Short-term, high-volume patterns
Rounding Bottom	Reversal	~65-75%	2.5:1	Slow formation, requires patience
